STR8-LIGN by QWERTY TYRE SOLUTIONS (PTY) LTD

Qwerty Tyre Solutions is an international-award-winning company, specialising in the manufacture of innovative wheel alignment technologies and equipment. We currently produce two internationally acclaimed systems, namely;

- **STR8-LIGN Passenger Wheel Alignment System**
- **STR8-LIGN Commercial and Trucking Wheel Alignment System**

We currently claim to manufacture "the world's smallest, lightest, and most accurate passenger wheel alignment system", which is a bold statement, yet we have yet to see a more all-inclusive and complete wheel alignment solution catering to the mobile mechanic and tyre specialist! At 15Kg, STR8-LIGN is transportable in a compact robust container, and is perfectly designed for a single user to effectively and accurately measure and repair; independent front and rear toe, total toe, camber, caster, setback, thrust angle and ride height variances.

STR8-LIGN has been successfully evaluated by several leading international automotive bodies and associations, including but not limited to Automechanika and the Automobile Association. In numerous independent "head to head" tests conducted by global industry leaders such as Bridgestone (The world largest tyre manufacture) and pitted against most of the industry's leading equipment manufacturers, STR8-LIGN has repeatedly proven its effectiveness in both speed and accuracy.

Today, STR8-LIGN is in operation globally by leading automotive brands such as Toyota Gazoo, Hyundai, Dunlop, Wheel Change U and the Royal Automobile Company of Victoria, and they all enjoy additional profits through saving valuable time and money and increasing their serviceability to their clients.

Our growing client base includes large automotive dealerships, independent workshops, mobile tyre fitment centres, multi-national tyre fitment centres, suspension specialists, vehicle manufacturers and professional race teams.

Quotes from industry leaders:

- **International Judges Panel Automechanika 2017:** "Designed and manufactured in South Africa, Qwerty Tyre Solutions' portable, easy-to-operate Str8-Lign wheel alignment system holds the promise of delivering numerous, cost-effective benefits for both workshop and in-the-field applications."
- **Hyundai Dealership CFO:** "By not outsourcing our alignment and keeping services inhouse, we have more control over our end goal and the technology has paid itself off within 2 months alone!"
- **Toyota Gazoo team driver & 4 times SA Rally Champion Guy Botterill:** "We have finally cut up our strings and now only use the Str8-Lign system for setting-up alignment before and during NRC rally events, we now do in minutes what used to take hours."
- **Denver Branders Owner of Race Co:** "works like a bomb, definitely gives me the edge being able to change wheel alignment to suit different track and weather conditions, and we're now only using Str8-Lign in my Race Co. workshop to help fellow racers achieve the best results."
- **Mobile Tyre Assist Town and Country Pty Ltd:** Because it is so quick to set up it is allowing me to finish the job quicker and as we know, time is money! Because it only takes 2 minutes to set up versus 15 minutes we are now offering free WA diagnosis. STR8-LIGN is now a critical part of my equipment, whereas, with the old machine in was more of an inconvenience!

At a fraction of the cost, with hundreds of systems deployed globally, STR8-LIGN has proven itself to be your go-to solution for all your alignment needs!
